

DO YOU STRUGGLE WITH MATH ?

Do you have trouble with even the simplest of math problems? Do your poor math skills affect your daily life?

You may have... “**DYSCALCULIA**”

Symptoms Can Include:

- Poor mental math ability
- Inability to grasp and remember math concepts
- Poor sense of direction, losing things often, being late and seeming absent minded
- No matter how hard you try or how much tutoring you receive there is little to no improvement in your math capabilities and/or the improvement is only temporary
- Difficulty keeping up with rapidly changing physical directions like in aerobic, dance, and exercise classes

If you have ever felt “dumb” or alone because of these troubles, we are here to tell you that you are **neither!** 4-6% of the World population suffers from this learning disability, and even though it is approved in the medical world (WHO and DSM-IV) just like dyslexia, it is an extremely unknown condition.
